

**Process 3 – Client Awaiting or Undergoing Assessment for Eye Gaze for Communication.**

Assessing Wheelchair Therapist identifies potential need for Ability Drive

Identifies that client is awaiting or undergoing assessment for an eye gaze device for communication

Wheelchair assessor makes contact with CAT assessor and informs that potential device may wish to be also used for wheelchair control in the future (this allows features and functions to support this to be included in feature matching).

Once eye gaze device is in situ wheelchair assessment continues as per pathway 2
